

XM Radio should be aloud to offer XM Instant Traffic & Weather. As an XM subscriber I pay for this service. It is an easy, fast and safe way for me to count on up to the minute traffic and weather WITHOUT having to be subjected to questionable content, commercials, political views etc.. These are services that are needed when driving in any city, not when it fits in a broadcast schedule. To make a paying consumer have to surf local broadcasters to maybe find this content is absurd and may very well cost lives. I specifically subscribe to XM to be able to decide what my family listens to not have it dicated by what is available from traffic to kids to news. It is important to me that when travelling I can find quick and weather and traffic updates. This is exactly the type of service that should be encouraged as it truly is a public benefit! Please respectfully consider this when making any decision. Thank you for your time and considerations,
